

LRES3041PT-OCP

—OCP3.0 Dual-port Gigabit Copper Ethernet Network Adapter (Intel I350)

Overview

LRES3041PT-OCP is an OCP3.0 SFF dual-port copper Gigabit Ethernet network adapter independently developed by Shenzhen Lianrui Electronics Co., Ltd. based on the Intel I350 master control solution. This adapter is mainly designed for use in servers and their application equipment.

LRES3041PT-OCP can simultaneously bundle and aggregate multiple ports into a group to achieve fault tolerance and redundancy, to expand network bandwidth and ensure network performance, and can automatically detect and implement real-time fault recovery. The communication of the port is routed to other members in the same group to continue operation to achieve uninterrupted high-performance communication.

LRES3041PT-OCP adopts the SFF standard structure of OCP3.0, which is developed on the Ethernet MAC+PHY (media access controller and physical interface transceiver) controller based on Intel Gigabit rate, and supports NCSI function and Scan Chain Function, also has ESD anti-static protection ability and surge protection ability.

Key Features

1. An Intel solution OCP3.0 SFF structure of the dual-port optical fiber Gigabit Ethernet network adapter
2. With a rate of 1G
3. It can enhance DPDK to be more efficient and flexible in packet forwarding and packet processing.
